

Plan No.	2022 No.1	NQF / Reg. Ref No.	QA2 QA4	Plan Date	27/04/2022
1) Name your improvement	Risk Management Plan for Pests				
2) Explain why the improvement is needed	To manage pests in our service's indoor & outdoor environments while understanding their role within a balanced natural environment. To manage perceived pests while supporting minimal toxic chemical use and the health & safety of staff, children & visitors to our service. Connected to Sustainability Project Book pg 29, 10/3/2022				
3) List the outcomes from the improvement:	Staff & children are educated and supported in their knowledge to identify insects, arachnids (spiders), gastropods (slugs & snails), hymenoptera (wasps, bees & ants), lepidoptera (moths, butterflies in all stages of development), reptiles, snakes, birds & other rodents that may live or be present from time to time in our indoor & outdoor environments. Their life cycles, habits and risks to humans & property are understood so controls and management can be practiced in an environmentally sustainable way.				
4) List any consequences of NOT undertaking this improvement?	• High toxic chemicals are used unnecessarily with negative impacts to the natural environment & people connected with our service. • Staff, children & families using our service are at unacceptable risk of been bitten, poisoned, stung, or harmed in some way. • Food sources and biodiversity is reduced or eliminated due to reduced number or extermination of the fauna in our environment.				M
5) Strategies – List the steps, activities and tasks you plan to implement to achieve your improvement					
Short Term			Long Term		
• Identify what staff, children & families consider are pests in our environment. • Understand their risks to the health & wellbeing of the humans, resources, flora & fauna. • Understand how to manage the risk using natural, low toxic or toxic chemicals.			• Design a resource to support the identification of pest risks in our indoor & outdoor environments. • Design a risk assessment & matrix to support management & control measures of risks. • Ongoing support & education in this area as new staff, committees & families are involved with our organisation.		
From your strategies above list the actions you will take to implement your improvement plan					
Action Steps (Implementation Plan) – add rows as required				Responsibility	
Brainstorm risk matrix for pest management				Sustainability Group	
Brainstorm current pests				Sustainability Group	

Brainstorm possible treatment methods	Sustainability Group
Design a risk assessment including all pests identified in brainstorming session	Director
Research risks and dangers of each pest	Director
Design a matrix spreadsheet that supports agreed management of flora and fauna that might be a risk or perceived as a risk.	Director/Committee/Sustainability group
Share information through services communication channels with families to gather their input and feedback.	Director/Assistant Director/Admin
Involve children in discussions about flora and fauna, care and risk management.	Educators

Reflections, Evaluation & Feedback			
Plan No.	2022 No.1	NQF/Reg. Ref No.	QA2 QA4
10/03/2022	Sustainability group met to brainstorm 'Risk Matrix for Pest Management' See pg 29 in Sustainability Project Book		
24/04/2022	Elizabeth drafted possible risk management layout of sustainability group's feedback.		
29/04/2022	An MS Teams conversation started to brainstorm possible treatment methods of ants in the preschool outdoor environment.
